LOCATION

Where you will install your fan is the first step in selecting the right fan for your space.

- Dry, indoor location: Choose from any of our fans—dry, damp or wet rated.
- Outdoor covered or high-humidity indoor location: Choose from our damp or wet rated fans.
- Outdoor location with likely direct contact with water: Choose from our wet rated fans.

= Dry location rated

= Damp location rated

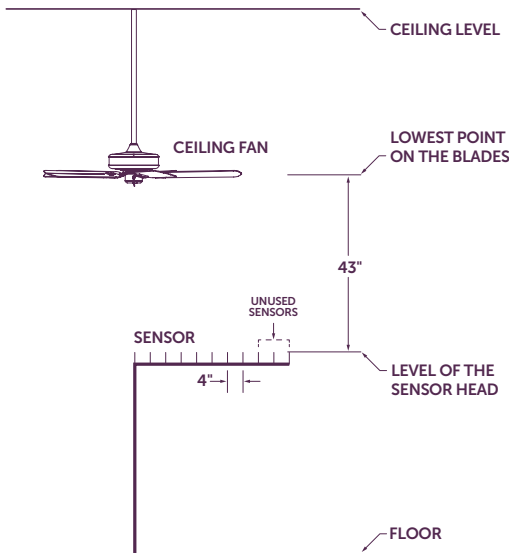

= Wet location rated

AIRFLOW

When you buy a fan, you want to know that it will provide the airflow and comfort you desire. The Department of Energy (DOE) has made that decision easier with an airflow test procedure.

DOE AIRFLOW TEST PROCEDURE

The ceiling fan is mounted directly to the ceiling using the fan's included downrod. Hugger fans are flush-mounted. A sensor arm gauges airflow from various points along the length of the blade.

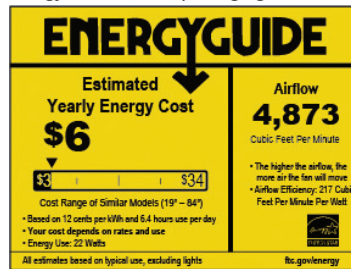

Additionally, packaging highlights the average-speed airflow, which, of course, is lower than the high-speed CFM numbers previously listed. We have chosen to include high-speed values in this catalog, along with the average-speed values required on the Energy Guide label.

LIGHTING

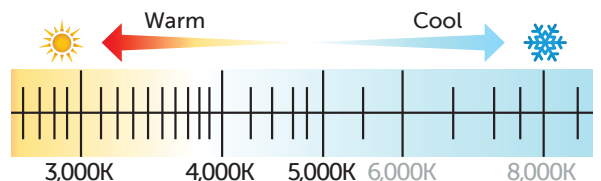

LED BOARDS or **LAMPS**—All integrated light kits, light kit accessories and accessory fitters utilize LED technology and meet ENERGY STAR 4.0 and CEC TITLE 24 specifications.

CCT SELECT

How do you like your light—warm, white or cool? Now you can choose! Featured on our DC fans and Kwartet, CCT Select allows you to choose the correlated color temperature (CCT) of your fan's light kit—3,000K, 4,000K or 5,000K.

Press and release button to cycle through color correlated temperatures:
3,000K/4,000K/5,000K
